PROPOSAL

Course Title: Object Oriented Programming

Course Instructor: Sir Shahid Khan

Senior Lab Instructor: Ms. Mehwish Saleem

Course Code: CSL-323

Class: BS (CS) - 2A

PROJECT TITLE:

**“ EYE CLINIC MANAGEMENT
SYSTEM”**

GROUP MEMBERS LIST:

- 1- Shehneez Arif (02-134242-035)
- 2- Muneeza Ahmed (02-134242-023)

PROJECT SCOPE:

This project aims to build an **Eye Clinic Management System** using Java and Object-Oriented Programming. It will help eye clinics digitize their records, simplify appointment handling, and improve organization for doctors and staff. The goal is to reduce manual paperwork and ensure efficient patient management.

PROJECT ABSTRACT:

The Eye Clinic Management System is a Java-based desktop application focused on streamlining patient and appointment handling in ophthalmology clinics. It will enable users to add and manage patient records, doctor profiles, and appointments with ease. Using core OOP concepts like **encapsulation, inheritance, polymorphism, and abstraction**, the system will offer a structured, modular solution for small-scale clinical operations. The application will be built using Java's console-based interface.

PROJECT FUNCTIONALITIES:

- Register new patients and store essential information (name, age, contact, issue)
- Add/view doctor profiles with specialization and availability
- Book, cancel, and view appointments
- Search for patient or doctor by name or ID
- View all scheduled appointments for a specific day

MODULE DISTRIBUTION:

Muneeza Ahmed (02-134242-023):

- Patient Module: Add/search/view patient info
- Appointment Module: Book/cancel/view appointments
- Class design & main program integration

Shehneez Arif (02-134242-035):

- Doctor Module: Add/view doctor profiles
- Testing and output verification
- User interaction and menu design
